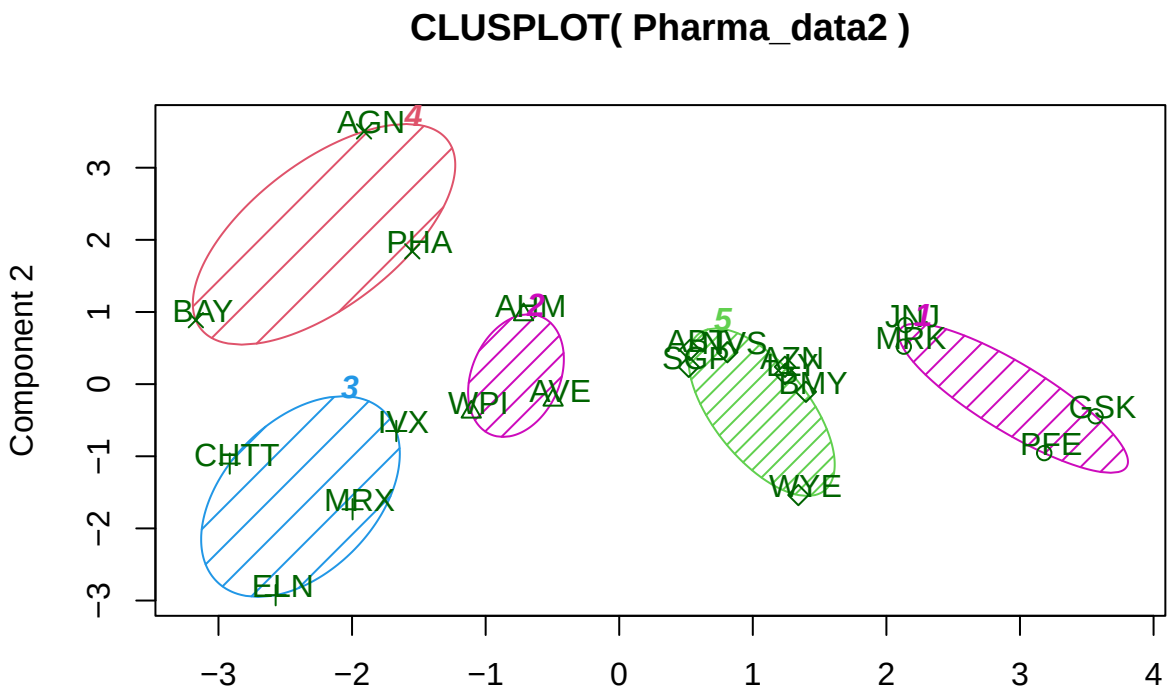
View(Pharma_data3)

#To view the cluster plot

clusplot(Pharma_data2,fit$cluster,color = TRUE,shade = TRUE,labels = 2,lines = 0)
```



These two components explain 61.23 % of the point variability.

```
#Task 2 Interpret the clusters with respect to the numerical variables used in forming the clusters.

#By noticing the mean values of all quantitative variables for each cluster

#Cluster_1 - AGN, PHA, BAY - These have the highest PE_Ratio. ROE value is not good.

#Cluster_2 - JNJ, MRK, GSK, PFE - They have the highest market_Cap and has Good Leverage value.
```

```
#Cluster_3 - AHM, AVE, WPI - They have lowest asset_turnover,and lowest beta.

#Cluster_4 - IVX, MRX, ELN, CHTT - They have the lowest market capitalization, Leverage and Beta are go

#Cluster_5 - ABT, NVS, AZN, LLY, BMY, WYE, SGP - They have lowest revenue growth, highest assest turnov

#Task 3: Is there a pattern in the clusters with respect to the numerical variables (10 to 12)? (those
#used in forming the clusters)

#For cluster 1: It  has the highest PE_Ratio and needs to be held as per the media recommendations.
#For cluster 2: It has the highest market_Cap and has Good Leverage value. And they can be moderately r
#For cluster 3: It has lowest asset_turnover,and lowest beta. But media recommendations are highly posi
#For cluster 4: The leverage ratio is high, they are moderately recommended.
#For Cluster 5: They have lowest revenue growth, highest assest turnover and highest net profit margin.
#They are  recommended to be held for longer time.

#Task 4: Provide an appropriate name for each cluster using any or all of the variables in the dataset.

#Cluster 1: Hold cluster -They have decent numbers.
#Cluster 2: Moderate Buy (or) Hold cluster.
#Cluster 3: Buy or Sell Cluster
#Cluster 4: Buy Cluster - It has good stability.
#Cluster 5: High Hold cluster
